

## SolarMax Energy Systems

# Photovoltaic carport double glass module

## Overview

---

What is a photovoltaic carport?

A photovoltaic carport or PV carport is a carport that has solar panels instead of a traditional roof. A photovoltaic carport is another term for a solar panel carport. This type of carport can be built almost anywhere. You can have one at your home or in a large parking lot.

What is a double solar carport?

Double Solar Carport:- width 5200mm metres, Length 6550mm, minimum clearance up to 2.5m. Interested in a single solar carport?

Check by clicking [here](#). Carport 5200mm wide x 6500mm deep. This modular carport system offers easy installation, thanks to its lightweight construction so does not require heavy machinery.

How much wind can a carport withstand?

The open construction of carports often has to withstand high wind and snow loads. The proofed static certificate provides assurance that a maximum load of  $3\text{ kN} / \text{m}^2$  can be carried without any problems up to snow load zone 3. With  $4.55\text{ kN} / \text{m}^2$ , the wind load is to be regarded as sufficiently dimensioned for almost all application areas.
