

SolarMax Energy Systems

Photovoltaic energy storage cabinet working ESS power base station

3.2v 280ah

Overview

What is energy storage system (ESS)?

Components What is ESS?

An Energy Storage System (ESS) is a specific type of power system that integrates a power grid connection with a Victron Inverter/Charger, GX device and battery system. It stores solar energy in your battery during the day for use later on when the sun stops shining.

How does ESS work?

ESS can be configured to optimise self-consumption or to keep batteries charged. Optimising self-consumption: When there is more PV power than is required to run loads, the excess PV energy is stored in the battery. That stored energy is then used to power the loads at times when there is a shortage of PV power.

Can ESS work with a grid-tie PV inverter?

PV (optional) ESS can work with both Grid-tie PV inverters and/or MPPT Solar Chargers. (A mix of both is also possible.) When using Grid-tie PV Inverters we recommend monitoring is performed using the CCGX. See CCGX manual for the options. ESS can also be operated without PV.

What is ESS mode?

The ESS mode is configured to 'Keep batteries charged'. When using a grid-tie inverter, it is connected to the AC output as well. When grid power is available, the battery will be charged with power from both the grid and the PV. Loads are powered from PV when that power source is available.

How does ESS work if a utility grid fails?

Keep batteries 100% charged: ESS can also be configured to keep the batteries fully charged. A utility grid failure is then the only time battery power

is used as a backup. Once the grid is restored, the batteries will be recharged either from the grid or from solar panels when available.

Can ESS be used in a self-consumption system?

Use ESS in a self-consumption system, a backup system with solar, or a mixture of both. For example, you can use 30% of the battery capacity for self-consumption and keep the remaining 70% available as a backup in the event of a utility grid failure. ESS can be configured to optimise self-consumption or to keep batteries charged.
