

## SolarMax Energy Systems

# Photovoltaic module exports account for 10

## Overview

---

Is India a net importer or exporter of photovoltaic (PV) products?

India is making significant progress in transitioning from a net importer to a net exporter of photovoltaic (PV) products. In Fiscal Year (FY) 2024, Indian PV manufacturers exported approximately US\$2 billion worth of PV modules. The export value of PV modules from India increased by more than 23 times in just two years between FY2022 and FY2024.

Does India export photovoltaic modules?

The export of Indian photovoltaic (PV) modules has risen exponentially by more than 23 times between Fiscal Year (FY) 2022 and FY2024, primarily to the US, which accounted for more than 97% of India's exports in both FY2023 and FY2024.

Why are PV modules being delayed in the United States?

The rapid rise in delays between mid-2021 and late 2022 corresponded with constrained importation of PV modules into the United States, related to issues including policies that targeted China's alleged use of forced labor (WRO on Hoshine, UFLPA), the AD/CVD circumvention investigation, and COVID-related supply chain disruptions.
