

## SolarMax Energy Systems

# Photovoltaic module project internal rate of return

## Overview

---

PVCalc allows you to calculate the ROI of PV solar energy projects - viewed as financial investments. The results are presented graphically, divided into four sub-categories: Results, effect of leverage, effect of irradiation and panel price, effect of inflation. What is the internal rate of return (IRR) of a solar system?

Subsidies or grants received from the secondary market enhance the internal rate of return. The IRR links the present value of a photovoltaic system cost with the electricity or heat generated over the life of the solar energy system. It gives the owner a view of the financial behavior of the system over the life cycle of the PV system.

What is the internal rate of return for a PV system?

The formula for the internal rate of return for a PV system includes the following components/definitions: PV system cost, First cost subsidies, PV energy cost and Secondary Market Characteristics and PV energy price. PV system cost (PV<sub>sys</sub>) equals the installed cost of the photovoltaic system.

How do solar developers calculate IRR?

By inputting all projected costs and electricity sale revenues into the IRR calculation, solar developers can rank competing PV projects by profitability to select the best investments. Tracking actual IRR over time verifies that positive returns meet targets.

What is IRR & how does it affect NPV?

With regards to installing a solar panel system, the IRR is a criterion that indicates the returns that your installation is expected to generate for you as an investor and serves as a benchmark for future projects. Hence the discount rate has an impact on the NPV of a project.

What is PV energy cost?

PV energy cost (EPVc) entails the PV system's installed cost minus the value of First Cost Subsidies, plus the net present value of maintenance and repairs, over the life of the PV system. This equals the total cost of the energy generated by the PV system. Source: André Karwath aka Aka.

What is a detailed PV model?

If we look at PV, there's a detailed PV model, PV watts which is only PV watts and then high-concentration PV. Click on the Detailed PV Model, which is what we use most frequently, and you can see you can look at different types of systems, power purchase agreements, or distributive systems with different ownership models and classes.
