

## SolarMax Energy Systems

**Photovoltaic panels are  
overpowered when in use**

## Overview

---

Can solar panels be used during a power outage?

Explore solar panels utilization during power outages. If your PV system generates a large amount of excess power (learn about the power output from a solar panel) and you do not know what to do with it, you can always increase the load.

How to manage excess photovoltaic production?

As the below video suggests, a combination of the four possible options—grid injection, power limitation, storage, and the very attractive alternative of load shifting—frequently turns out to be the best way to manage excess photovoltaic production.

What can I do with excess solar power?

Many options are available to make the best use of your excess solar power. Some of these are as simple as accumulating solar credits for future electricity bills or installing batteries to achieve solar self-consumption.

Does solar energy consumption match photovoltaic production?

In solar power installations with photovoltaic production, the building electrical energy consumption does not always match the photovoltaic production. The degree of this mismatch depends on the building activity and its consumption profile, but it is globally true for a majority of buildings.

How to power a solar panel without a battery?

Here are the most common solutions: Powering the load with solar energy without having any use for the excess generated solar power is inefficient, which is why one of the best solutions is to be connected to the grid, especially if you opt to use solar panels without a battery.

Is photovoltaic self-consumption effective?

Load consumption is therefore not synchronized with the photovoltaic power production profile. Under these conditions, photovoltaic self-consumption is effective only if a good portion of end-user usage is shifted to the hours of sunlight.

## Photovoltaic panels are overpowered when in use

### Does an MPPT solar controller, turn excess voltage ...

The solar panel can deliver, with good solar energy, 110 watts of electrical power. The MPPT controller circuits collect the power from the panel ...
