

SolarMax Energy Systems

Photovoltaic panels installed on rural roofs in Denmark

Overview

Solar power provided 1.4 TWh, or the equivalent of 4.3% or 3.6% of Danish electricity consumption in 2021. In 2018, the number was 2.8 percent. Denmark has lower solar insolation than many countries closer to Equator, but lower temperatures increase production. Modern solar cells decrease production by 0.25% per year. 2020

Project Sun is the first large-scale grid connected rooftop solar system in Denmark, pioneering an innovative model that can be replicated by future projects to accelerate the use of buildings as the physical platform for renewable energy production.
