Photovoltaic panels installed on rural roofs in Germany

Overview

Are rooftop solar systems driving PV installations in Germany?

Rooftop solar systems are driving PV installations in Germany. Credit: [moreimages/Shutterstock](#). Germany installed a record 14GW of solar energy capacity in 2023 through more than a million new solar power systems, many of which were residential rooftop installations.

Are all regions in Germany suitable for rooftop photovoltaics?

Household rooftop photovoltaics, which accounted for more than half of all systems installed in Germany in 2023, play an important role here. But not all regions in Germany are equally suitable for their installation. The purpose of this study is to identify regions which still have a particularly high potential for new installations.

What percentage of Germany's roof surfaces are equipped with photovoltaics?

So far, only a small percentage of Germany's roof surfaces is equipped with photovoltaics. Recently, however, a significant increase in the installation of such systems has been observed. In 2023 alone, photovoltaic systems were installed on 3% of residential buildings with one or two apartments.

How many homes in Germany have a photovoltaic system?

More and more households in Germany have already installed photovoltaics in recent years. By the end of 2023, one in eight residential buildings with one or two apartments had a photovoltaic system installed. Most installations are located in the south of Germany, where some regions already boast one in five dwellings with photovoltaics.

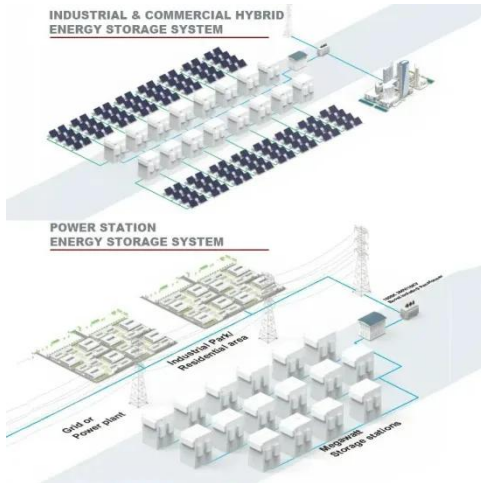

How has German government aided the growing rooftop solar sector?

The growing rooftop solar sector has been enabled by the German government's financial framework.

Can photovoltaic systems be installed on roofs with high radiation?

In the transition, however, it is efficient to install photovoltaic systems on roofs with optimal orientation in regions with high global radiation. Based on the regional distribution of global radiation, we estimate a diffusion model for household PV on the district level in Germany.
