

SolarMax Energy Systems

Photovoltaic power station power generation in Portugal

Overview

Solar power is a growing source in the Portuguese energy mix. Solar power contributes 6.72 TWh of generation to the Portuguese grid, accounting for 14.5% of total electric power generation as of 2024 with 5.81 GW of installed capacity. Portugal has set a goal of between 8.1 GW and 9.9 GW in.

The is an 11 megawatt plant covered 150 acres (0.61 km) and employs 52,000 PV panels. The panels are raised 2 meters off the ground thus allowing grazing to continue.

Amid the economic challenges posed by Covid-19, Portugal announced a EUR 9.2 billion stimulus package in March 2020. This encompassed various measures, including expediting permits and.

In 2019, a competitive auction for a new PV plant saw a worldwide record low bid of 14.76 per MWh, well below other generating technologies. The auction awarded 1.150 MW of solar capacity to various companies, significantly more than the total installed.

In addition to tenders for large scale power plants, Portugal has set a framework for the installation of small scale rooftop solar installations which came into force in January 2020.

In November 2016, an pilot-project of 840 solar panels with a total capacity of 200 kWp began to produce power on the reservoir of the with an annual production of 300 MWh. At the end of 2021.
