Photovoltaic power station power generation in Vietnam

Overview

utilizes four main sources of : , , and . At the end of 2018, was the largest source of , contributing about 40% to the total national . In 2020, wind and solar had a combined share of 10% of the country's , already meeting the government's 2030 goal, suggesting future displacement of growth of capacity. By the end of 2020, the tot.

This represents an annualized installation rate of about 90 W per capita per annum, placing Vietnam among world leaders. As of 2019, Vietnam has the highest installed capacity in Southeast Asia. [6] In 2020, there are 102 solar power plants operating in the country with a total capacity of 6.3 GW.

Renewable energy in Vietnam

OverviewHydropowerWind energySolar energyBiomass energySolid waste energy (waste-to-energy)Geothermal energyTidal energy

Vietnam utilizes four main sources of renewable energy: hydroelectricity, wind power, solar power and biomass. At the end of 2018, hydropower was the largest source of renewable energy, contributing about 40% to the total national electricity capacity. In 2020, wind and solar had a combined share of 10% of the country's electrical generation, already meeting the government's 2030 goal, suggesting future displacement of growth of coal capacity. By the end of 2020, the tot...
