

SolarMax Energy Systems

Photovoltaic solar panels in rural Haiti

Overview

Can solar energy be used effectively in Haiti?

Solar energy can be used effectively in Haiti, offering energy self-sufficiency to the most isolated cities in the absence of a power grid. The country's location in the tropics gives it very strong solar energy potential. It is believed that solar energy will play a fundamental role in access to electricity over the next 10 to 15 years.

Why is distributed solar PV the only energy source in Haiti?

Since only about 13% of the people even have grid access, distributed solar pv is the only energy source that can supply all the people electricity for now. Haiti has limited energy resources: no petroleum or gas resources, small hydroelectricity potential and rapidly declining supplies of wood fuels.

Is a solar startup a solution to Haiti's low-cost electricity crisis?

With the demand for low-cost electricity being so high in Haiti, businesses are starting to emerge and are combating the frequent problems residents endure. One company, known as 10Power, is a solar startup partnering with locals to install and provide financing for solar energy projects in Haiti's rural areas.

Is hydroelectricity a viable alternative to energy in Haiti?

One alternative that Haiti is trying to integrate into its systems is hydroelectricity, which is power that water generates. Of all the renewable options available, hydropower has contributed the most to Haiti's energy supply.

Can wind power deliver electricity in Haiti?

Estimates suggest that wind power can deliver electricity at 30-50% of the cost of solar energy in windier areas. Though there are no plans to build wind farms in Haiti, the construction of a power plant did begin in 2017. Not only

will the plant optimize wind but it will also be the first to utilize a mixture of wind, solar and diesel energy.

What is the solar power plant capacity in Haiti?

The solar power plant in Haiti has a capacity of 1.2 MWp. It is located in the Commune of Jacmel, South-East Department, and is connected to the regional electricity network of Jacmel.
