Pretoria Communications 5G base station 5MWH liquid cooling

Overview

What is a 5G macro base station?

5G macro base stations may require several new, continuously running, power-hungry components, including microwave or millimeter wave transceivers, field-programmable gate arrays (FPGAs), faster data converters, high-power/low-noise amplifiers and integrated MIMO antennas. 5G requires multiple, multi-element antennas.

Can thermal management solve 5G heat issues?

Fortunately, in most cases, thermal management techniques are already available to solve heat issues facing 5G communications devices. Base stations, macro cells, micro cells, small cells and other devices are all part of the dynamic cell phone infrastructure.

Can mmWave antennas be used for 5G?

5G requires multiple, multi-element antennas. Current strategies for thermally managing mmWave antennas include forced air and liquid cooling. Despite being effective in removing the heat, active cooling systems with fans or pumps require the use of electricity and can make the system more complex and hard to maintain.

Is 5G a high frequency?

Much of the 5G spectrum is in extremely high frequency (EHF) or millimeter wave (mmWave) frequencies. Faster millimeter wave frequencies are more susceptible to the environment. They have difficulty passing through walls and windows, so indoor coverage is limited.

Pretoria Communications 5G base station 5MWh liquid cooling

Nokia and Elisa see sustainability leap in world-first 5G liquid

Nokia announced that its liquid cooling 5G AirScale Base Station solution has helped Finnish mobile operator, Elisa, reduce the potential energy expenses of its base station ...
