

## SolarMax Energy Systems

# Price Trends of Smart Energy Storage Systems

## Overview

---

According to PV Magazine (March 2024), the cost of energy storage systems has been steadily declining in recent years, largely due to increased adoption of the technologies and the expansion of grid storage in major markets like China and the U.S. How much does energy storage cost?

Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs. Fixed operation and maintenance costs for battery systems are estimated at 2.5% of capital costs.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

What are energy storage technologies?

Informing the viable application of electricity storage technologies, including batteries and pumped hydro storage, with the latest data and analysis on costs and performance. Energy storage technologies store energy either as electricity or heat/cold, so it can be used at a later time.

What influences future energy storage costs?

Projections for future energy storage costs are influenced by various factors, including technological advancements and government policies like the Inflation Reduction Act. These initiatives promote growth in the energy storage sector.

How have energy storage costs changed over the past decade?

Trends in energy storage costs have evolved significantly over the past

decade. These changes are influenced by advancements in battery technology and shifts within the energy market driven by changing energy priorities.

Why are energy storage systems so expensive?

Energy storage systems (ESS) for four-hour durations exceed \$300/kWh, marking the first price hike since 2017, largely driven by escalating raw material costs and supply chain disruptions. Geopolitical issues have intensified these trends, especially concerning lithium and nickel.
