

SolarMax Energy Systems

Price of 100W solar energy in Finland

Overview

In Finland, the prices of solar panels have dropped significantly in recent years, which has made them an even more attractive option for households and companies. On average, the price of an installed solar panel system is around 1,200–1,800 euros per kilowatt (kW). Can solar power improve the profitability of buildings in Finland?

LUT University has investigated how the profitability of solar electricity could be improved in different types of buildings in Finland. Researchers have debunked myths related to the orientation and dimensioning of solar photovoltaic systems and sales of surplus electricity.

How much solar power does Finland produce in 2022?

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts – more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European countries. The Netherlands, in contrast, produce over seven times more per capita.

Is solar electricity a viable alternative to self-consumption in Finland?

In Finland, solar electricity has so far been a financially competitive alternative only if the self-consumption rate has been high. Now, however, the situation is changing, as solar farms are being built to produce electricity to sell directly to the main grid.

Why are electricity prices so high in Finland?

This is 2272% more than yesterday. Finland, like many countries, has a complex electricity market that is subject to various factors that impact prices. Electricity prices in Finland are influenced by a variety of factors, including supply and demand dynamics, production costs, weather conditions, market regulation, and government policies.

How much does solar energy cost in winter?

Offices, factories and schools start, electric heating is still running, and there is little solar generation in winter months. Demand pushes the 10:00 spot price to €0.0815 / kWh, roughly $2.5 \times$ the cheapest hour. Commercial activity stabilises and, in the sunnier half of the year, rooftop and utility-scale PV add supply.
