

SolarMax Energy Systems

Prices of the three major photovoltaic components

Overview

What is included in the quoted price of a solar power system?

The quoted price of a solar power system also includes soft costs that are not evident when looking at a completed installation: permitting, inspections, grid interconnection, taxes, transportation, land acquisition, design work, skilled labor, customer acquisition, overhead, profit margins, etc.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.

How many inverters does a PV system use?

The DC cables are connected to 19 utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.

Prices of the three major photovoltaic components

Photovoltaic Price Index

Every month we publish a current price index on the development of wholesale prices of solar modules. In doing so, we differentiate between the main technologies available on the market.
