

## **SolarMax Energy Systems**

# **Rural home solar high power water pump inverter**

## Overview

---

### How to choose a solar pump inverter?

Understand the rated power of the water pump. Normally, the rated power of the solar pump inverter should be slightly more than or equal to the rated power of the water pump to ensure that the pump can be operated normally. For instance, if the water pump's rated power is 2kW, the selected inverter should have a rated power of 2kW or higher.

### Are solar pump inverters the perfect off-grid water pumping solution?

Solar pump inverters are the perfect off-grid water pumping solution! Solar pump inverters offer a reliable and trustworthy water supply solution in rural, remote, or isolated regions lacking grid connectivity, thereby eliminating the need for justifying expensive grid infrastructure construction.

### What is a solar pump inverter?

The solar pump inverter is an off-grid inverter that doesn't rely on the grid and operates independently of the load. The traditional off-grid inverter requires a battery, which costs about 30% of the system's cost. The system has a life span of only 3-5 years, which can affect your ROI.

### Can a solar inverter drive a water pump?

Let's explore them. Three solar inverters can drive a water pump and convert photovoltaic direct current into alternating current. It is an inverter designed for running water pumps using solar power. It directly transforms the direct power produced by solar panels into an alternating current to drive the pump.

### How does a solar inverter work?

A solar inverter changes the DC power from the solar panels into AC power, so you can use it to run things, like water pumps. Some inverters also change the voltage and make the power flow better. This is very important for solar water systems because it helps keep the water pumping even when the sun isn't

shining as much.

What is a solar on-grid inverter?

Solar on-grid inverters are also known as grid-tied inverters. This type of inverter feeds the electricity produced from the solar panels directly into the utility grid. Then, the water pumps draw their power from the grid.
