

SolarMax Energy Systems

Slovakia double-glass photovoltaic modules

Overview

Why should you choose Slovak solar?

At Slovak Solar, we believe that progress comes from constant innovation. From day one, we've been breaking new ground in Slovakia's solar energy sector. We were one of the first company in Slovakia to install Building-Integrated Photovoltaics (BIPV).

What are the benefits of double glazed solar panels?

Double-glazed solar panels, also known as dual glass solar panels, offer increased reliability, especially for large-scale photovoltaic projects. They provide better resistance to higher temperatures, humidity, and UV conditions and have better mechanical stability, which reduces the risk of microcracks during installation and operation.

Is double glass a good choice for a PV farm?

Regarding the moisture issue, the main argument against double glass modules is addressed by the use of polyolefins as encapsulating substances. The problem is further solved by the execution, as confirmed by e.g. PVEL tests.

Why is a photovoltaic panel a good choice?

Photovoltaic panels are a good choice because they are more resistant to blown sand and corrosion in general. They better withstand gusts of wind and mechanical snow loads. Due to their durability, manufacturers like AKCOME, Jinergy, or ZnShine can offer extended warranties of up to 12 or even 15 years. The passage is about the advantages of photovoltaic panels.

What changes have been made in glass-glass modules?

In the case of Glass-Glass modules, an important change has been made by replacing EVA with polyolefins as an encapsulating substance. This is due to the free radicals generated during the EVA cross-link lamination process.

Traditional backsheets are somewhat permeable to free radicals, but the double glass module is not.

Slovakia double-glass photovoltaic modules

Slovakia's First Solar Module Factory

Agora Solar has deliberately selected a production line that can be converted to other forms within a short period of time, noting that it also plans to produce semi-transparent ...
