Slovenia Photovoltaic Panel Solar Energy

Overview

Slovenia's solar market is experiencing significant growth, with 85 MW of new capacity installed in the first half of 2025, according to PV Magazine. This expansion is driven by the increasing adoption of both residential and commercial and industrial (C&I) solar projects. How much solar energy does Slovenia have in 2024?

In 2024, Slovenia installed a record 230 MW of new PV capacity, bringing the total installed capacity to 1.1 GW by the end of the year. This rapid expansion demonstrates the growing importance of solar energy in Slovenia's energy mix.

How many solar power plants are there in Slovenia?

In 2022, 12,698 solar power plants with a total capacity of 227.6 megawatts (MW) were connected to the grid in Slovenia and 18,034 solar power plants with a total capacity of 411.8 MW in 2023. In total, 49,092 solar power plants with a total capacity of 1,104.5 MW were in the system on 31 December 2023.

How much power does a photovoltaic system need in Slovenia?

The government and Slovenia's EU Cohesion Policy Program are co-financing the initiative, the ministry said in a statement. "The total nominal power of the installed photovoltaic modules must be at least 100 kW, with or without battery energy storage systems," the authorities said.

How much will Slovenia spend on solar energy projects?

Data Protection Policy Slovenia has set aside €16 million (\$16.7 million) to support solar energy communities, requiring projects to include at least 100 kW of PV capacity, with or without storage. The program will run until 2027.

Does Slovenia have a solar market?

Slovenia's solar market is experiencing significant growth, with 85 MW of new

capacity installed in the first half of 2025, according to PV Magazine. This expansion is driven by the increasing adoption of both residential and commercial and industrial (C&I) solar projects.

How much solar power will Slovenia have by 2030?

In its report, issued a month ago, SolarPower Europe estimated that Slovenia could reach 6.2 GW in total solar power capacity by 2030. Of note, a record 55.9 GW was installed in Europe last year, 40% more than in 2022. The boom in photovoltaics is evident throughout the planet.
