

## **SolarMax Energy Systems**

# **Smart City Communication Green Base Station**

## Overview

---

The emergence of ultra-dense 5G networks and a large number of connected devices will bring with them significant increases in energy consumption, operating costs, and CO2 emissions. At the sam.

How to make communication green?

In these researches, two major techniques are explored to make communication green, one is narrowband communication another is pulsed transmission which helps transmitter and receiver to go to sleep mode. Using these two, power consumption and emission can be very less which will save the environment.

Where are 5G communication base stations located?

Furthermore, 5G communication base stations with energy storage are located at nodes 6, 8, 15, and 31, each group containing 100 base stations, labeled as groups 1, 2, 3, and 4. The fundamental parameters of the base stations are listed in Table 1.

Do 5G communication base stations engage in demand response?

In the above model, by encouraging 5G communication base stations to engage in Demand Response (DR), the Renewable Energy Sources (RES), and 5G communication base stations in ADN are concurrently scheduled, and the uncertainty of RES and communication load is described by using interval optimization method.
