Solar panels at an Italian power plant

Overview

In Genoa an Italian first in solar energy was underlined, as in 1963, Giovanni Francia built the first solar plant able to produce steam at temperatures above 550 °C.OverviewSolar power is an important contributor to electricity generation in , accounting for 12.3% of total generation in 2023, and with a total installed capacity of 36.01 GW. As of 2023, government plans are targeting solar PV capacit.

The entire nation of Italy retains high potential for solar energy production, ranging from 3.6 kWh per square meter per day in the Po river plain to 5.4 kWh per square meter per day in . .

Installed capacity in Italy was less than 100 MW before 2008. Growth accelerated during 2008 and 2009 to reach over 1,000 MW installed capacity and tripled during 2010 to exceed 3,000 MW. The standout boom year.
