

SolarMax Energy Systems

Solar panels replace exterior walls

Overview

Can solar panels be installed on walls?

Photovoltaic systems are very versatile and scalable. Therefore, they can be mounted on various surfaces, including walls, roofs, and ground. Wall-mount solar panels are an attractive option for both residential and commercial properties as they can be installed on the exterior walls of buildings.

How to install wall-mount solar panels?

For installing wall-mount solar panels, firstly it is important to check the suitability of your home walls. The wall must be strong enough to support the weight of the panels. Wall mount systems require a special hardware kit. The problem with wall mount systems is that they have to work against gravity to stay in place.

Can solar panels be installed on a south-facing wall?

Wall-mounted solar panels are typically installed as modules on a south-facing wall. It's not logical to install your solar panels on a wall that isn't south-facing since wall-mounted systems already have setbacks in their energy generation due to their slope.

Are wall-mount solar panels a good option?

Wall-mount solar panels are an attractive option for both residential and commercial properties as they can be installed on the exterior walls of buildings. Wall-mount solar panels can save a lot of roof and yard space and utilize this idle space for solar electrical power production. Check out the Estimated Solar Cost of your home INSTANTLY!.

How to install vertical solar panels?

Vertical solar panels will require special mounting brackets for their installation process. You can install wall-mountable solar panels either parallel to your home walls or in the form of a canopy. In winter, the wall-mount solar

system's electrical power production is at the maximum level.

Should you install solar panels on the south side?

Moreover, if you still install mountable solar panels on the south side of your home, their efficiency will still be less than rooftop and ground-mount solar panels. This happens because the angle of sunrays will not be able to hit the wall mount panels properly. This leads us to another problem, which is the slope of wall mount solar panels.

 **Efficient
Higher Revenue**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150W Peak Output Power
- 2 MPPT Trackers, 150% DC Input Oversizing
- Max. PV Input Current 15A, Compatible with High Power Modules

 **Intelligent
Simple O&M**

- IP66 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locates PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

 **Flexible
Abundant Configuration**

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 Units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
