

**SolarMax Energy Systems**

# **Solar photovoltaic panels on the road**

## Overview

---

Solar roadways are highways built with special road panels that can generate solar power and have the potential to offer lighting, heating, and other smart road functionality.

Since its founding in 2006, Idaho-based company Solar Roadways has been pushing the endless benefits of its product – most famously in.

After successfully generating hype for so many years, what has Solar Roadways achieved so far?

And what of the other companies working.

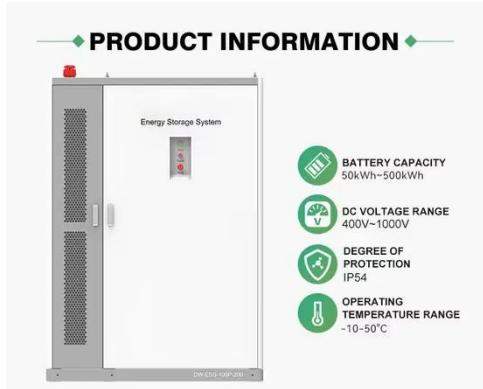

There's already an affordable and scalable way to produce renewable energy via the use of standard photovoltaic (PV) solar systems, commonly known as solar panels. When installed on rooftops (or custom ground-mounts), standard solar panels have long.

The various solar roadway trials conducted so far have revealed numerous problems, and they're proving hard to overcome. Here are the biggest concerns: .

Solar Roadways Incorporated is an American company based in , aiming to develop road panels to form a . Their technology is a hexagonal road panel that has a glass driving surface with underlying , electronics, and sensors to act as a part of solar array with programmable capability. The concept has been widely criticized as unfeasible and uneconomical as either a road surface or a photovoltaic system.

Solar roadways are highways built with special road panels that can generate solar power and have the potential to offer lighting, heating, and other smart road functionality.
