

SolarMax Energy Systems

**Solar photovoltaic panels
require no installation**

Overview

Plug-and-play solar systems are simple, ready-to-use solar setups that require no wiring, no rooftop installation, and no professional help. These are designed for convenience and are a more affordable way to start generating solar power. What are the requirements for a solar photovoltaic (PV) panel?

4.6.1 Solar photovoltaic (PV) panels supported by framing that have sufficient uniformly distributed and unobstructed openings throughout the top of the array (horizontal plane) to allow heat and gases to escape, as determined by the enforcing agency, are generally not subject to this requirement (CBC Section 903.3.3).

What is an example of a solar PV installation?

An example of this type of installation is a carport structure having solar PV panels as the roof.

Does a solar company offer free solar panels?

When a solar company offers free solar panels or a no-cost solar program, they refer to solar leases and power purchase agreements (PPAs). With solar financing arrangements, a solar company will install a solar system on your roof at no up-front cost. But the truth is that you don't yet own the solar system.

Are solar panels a viable alternative to solar power?

Solar power is undoubtedly at the forefront of the renewable energy movement. However, it's a common assumption that the only way to capitalize on this "clean" power option is by adding solar panels. Fortunately, today there are many viable solar panel alternatives that allow everyone the opportunity to harness the sun's rays.

Can solar panels be installed on a roof?

For installation of conventional (not BIPV) solar PV panels on existing roofs,

roof live load is not imposed where PV panels occur, provided the clear distance under the panels to top of the roof is less than 42" and provided the roof design is adequate for the concentrated loads from the solar PV panel support frames.

What are the requirements for solar PV installations in California?

Specific areas within Title 24 identify certain requirements for solar PV installations such as the California Electrical Code, California Building Code, California Plumbing Code, California Mechanical Code and California Residential Code (which applies to residential buildings of one or two units).
