

## SolarMax Energy Systems

# Solar power generation for home use in Kazakhstan

## Overview

---

There is enormous potential for renewable energy in Kazakhstan, particularly from wind and small hydropower plants. The has the potential to generate 10 times as much power as it currently needs from alone. But accounts for just 0.6 percent of all power installations. Of that, 95 percent comes from small projects. The main barriers to investment in renewable energy are relatively high financing costs and an abse.

Simply put, a homeowner can install a 200-kilowatt solar system. They can use 100 kilowatts for their own needs and sell the remaining 100 kilowatts to the grid. The local energy transmission company is required to buy this electricity at the average regional tariff. Is solar energy a viable energy source in Kazakhstan?

In 2019, another solar power plant in Kazakhstan, Saran, with a capacity of 100 MW started its operation in the Karaganda region (Satubaldina, 2020). According to the International Energy Agency (IEA), within the period of 40 years, solar energy has a potential to meet about 20-25% of the energy demand of the country.

How much solar energy does Kazakhstan use a year?

Solar energy can be widely used in two-thirds of the territory of the Republic of Kazakhstan. In the southern regions, the duration of solar radiation is from 2,800 to 3,000 hours per year, and the annual consumption of solar energy is from 1,280 to 1,870 kWh per 1 m<sup>2</sup>.

Should Kazakhstan invest in solar and wind energy?

Kazakhstan intends for renewable energy to constitute 30 percent of electricity generation by 2030 and 50 percent by 2050. Below I will make the case that there is significant opportunity for BRI investment to build up solar and wind energy.

Could Kazakhstan be a model for green energy development?

Kazakhstan's energy grid has not been modernised since its independence from the Soviet Union and is falling into a state of dereliction and disrepair.

With its sights set on 50 percent renewable energy by 2050 and substantial solar and wind energy capabilities, Kazakhstan could be a model for green energy development.

Is Kazakhstan a good place to install solar power plants?

At least 50% of the territory of Kazakhstan is suitable for installing solar power plants (Antonov, 2014). However, up until recently, solar resources of the country were not being used for power generation. Kazakhstan is developing solar energy technologies, namely production of photovoltaic modules using local silicon.

How can Kazakhstan boost its low-carbon electricity generation?

To boost its low-carbon electricity generation, Kazakhstan can draw valuable insights from successful regions across the globe. Looking towards nuclear and solar energy, which have proven effective in several countries, could be particularly beneficial.
