

SolarMax Energy Systems

Solomon Islands Solar Luminous System

Overview

We design our solar systems for Solomon Island's hot temperatures and remote, rural conditions. We only use lithium batteries; quality components from manufacturers like Deye and Victron Energy, and we ensure that we 'oversize' the amount of solar power to keep batteries fully charged. How many solar homes are there in the Solomon Islands?

"Solomon Islands currently has one of the lowest levels of access to electricity in the region, with over 85% of the population of Solomon Islands still without access to electricity and for this project alone, we received over 6,000 applications to obtain only 2,000 solar home systems," said Mr Aimaea.

How long do solar panels last in Solomon Islands?

The majority of solar energy systems installed in Solomon Islands last less than 2 years due to bad system design and poor user training. Superfly's systems are designed to last a minimum of 5 years (for basic systems) and 10 years for premium systems.

What is the visibility of the Solomon Islands?

Visibility is generally around 15 meters/50 feet to 21 meters/60 feet or more. Also, on dives over deep water, you can expect a visibility that exceeds 30 meters/100 feet. Snorkeling is considered very good in the Solomon islands. Indeed, the shallow reefs and the great visibility make snorkeling an exciting activity.
