

## SolarMax Energy Systems

# Sophia grid-connected inverter supply price

## Overview

---

What is grid connected inverter?

Grid connected inverter or grid tie inverter is designed specifically for grid connected application that does not require battery backup system. Grid connected inverter or grid tie inverter converts DC power produced by PV array to AC power to supply to electrical appliances and sell excess power back to utility grid.

What is an off-grid inverter?

Modern, off-grid inverters, or multi-mode inverters, can also be used to build advanced hybrid grid-tie energy storage systems. Many off-grid systems also use solar charge controllers (MPPTs), which are DC-coupled between the solar panels and battery, to regulate the charging process and ensure the battery is not over-charged.

What is a grid tie inverter?

On grid inverter or grid tie inverter from Inverter.com, can convert direct current into alternating current. Its AC output can synchronize with the frequency and phase of mains supply. On grid inverters are commonly used in applications where direct current voltage sources are connected to the grid, such as solar panels and small wind turbines.

What is a grid-connected PV system?

Additionally, the grid-connected PV system provides consumers with the flexibility to use electricity from the grid when sunlight is scarce or absent. When the grid-connected PV system is installed on residential or commercial rooftops, it provides solar electricity to all the electrical ports and sockets.

How much space is needed to install a grid-connected PV system?

Ans. 10 square meters or 100 sq feet of shadow-free area is needed to install a 1 kW grid-connected PV system. A grid-connected PV system is connected to

the local utility grid. The exchange of electricity units between the system and the grid occurs through the net metering process. Learn how this system works and how much it costs.

What is a grid interactive inverter?

Grid interactive inverter is designed for residential, commercial and industry applications. The inverter can operate on both grid-tied and stand-alone off-grid operations.
