

SolarMax Energy Systems

**String inverter is most suitable
for energy storage**

Overview

Are string inverters good for energy storage?

Typically, central inverters have been the standard for commercial and utility-scale energy storage applications. But that is shifting as costs drop and developers, EPCs, owners and operators discover more about the performance benefits of string inverters. The solar PV market embraced string inverters first, but energy storage is gaining momentum.

Are string inverters good for solar panels?

String inverters are an effective, affordable solution for many solar installations. The solar panel systems that are best suited for string inverters have little to no shading and panels that are on fewer than three separate roof planes.

What are the power topology considerations for solar string inverters & energy storage systems?

Power Topology Considerations for Solar String Inverters and Energy Storage Systems (Rev. A) As PV solar installations continue to grow rapidly over the last decade, the need for solar inverters with high efficiency, improved power density and higher power handling capabilities continue to increase.

What is a solar string inverter?

All trademarks are the property of their respective owners. Solar string inverters are used to convert the DC power output from a string of solar panels to an AC power. String inverters are commonly used in residential and smaller commercial installations.

How much battery does a string inverter use?

The battery voltage depends upon the system power level. Lower power single phase systems commonly use 48V battery, while higher power three phase systems use 400V battery. Systems with even higher power range of string

inverters could use 800V battery for storage. This may vary depending on the application and use case.

Who makes string inverters for rooftop solar energy systems?

Another string inverter manufacturer option for residential and commercial rooftop solar energy systems is the China-based company Sungrow. According to their website, their string inverter solution has been installed for almost 70 gigawatts (GW) of solar worldwide as of mid-2018.

String inverter is most suitable for energy storage
