

## SolarMax Energy Systems

# Substation battery cabinet installation site

## Overview

---

Where should batteries be installed in a substation?

Batteries installed in unit substations, electrical equipment rooms and instrument rack rooms shall comply with the requirements of this section, Main Substation Design and Unit Substation Design. In these locations, stainless steel hoods vented to the outside shall be installed over batteries.

What are the requirements for a substation battery system?

Substation battery systems shall be dedicated to connected DC load and shall not be part of a plant UPS or other DC system. Working space of at least 1 meter shall be provided in front of each battery rack or enclosure. Batteries shall be supplied with covers for all inter-cell connectors and terminals or insulated copper busbars to enhance safety.

What issues should a substation design engineer consider when installing batteries?

Hydrogen off-gassing is another issue that often arises when dealing with batteries in a substation. The design engineer should consult American Petroleum Institute Recommended Practice 500 to determine ventilation and classification requirements whenever batteries are installed indoors.

What is a petrochemical substation?

Substations are prevalent in all petrochemical facilities. Their function is to distribute power to the process units. Typically, there are either one or two types of battery systems within each substation. There may be a “station power” battery system to power the switchgear controls, which typically operates at 125VDC.

Why do substations need reliable energy storage solutions?

With the power utility landscape changing in terms of both architecture and methods of generation, the need for reliable energy storage solutions is

growing. Substations are evolving and adapting to support new and varied generation sources including renewables.

Where should a stationary battery be installed?

Stationary batteries shall be installed on open battery racks within a battery room to facilitate proper cooling, routine inspection, and maintenance. Covers for all inter-cell connectors and battery terminals or insulated copper busbars shall be supplied as part of the battery to enhance safety.
