

SolarMax Energy Systems

Suspended photovoltaic power station

Overview

Crescent Dunes began operation in September 2015, but went off-line in October 2016 due to a leak in a molten salt tank. It returned to operation in July 2017. While its average monthly production was expected to exceed 40,000 , as of May 2019 it never reached that value and only exceeded half of it during 9 months. The of a new thermal plant requires up to four years to achieve 100% operating I.

Suspended photovoltaic power station

Photovoltaic Power Station

A photovoltaic power station, also known as a solar park, is a large-scale photovoltaic system (PV system) designed for the supply of merchant power into the electricity grid.
