

## SolarMax Energy Systems

# The cost of wind and solar complementary technology for Ecuadorian communication base stations

## Overview

---

The growth in electricity consumption and the resulting pollution suggests the need to incorporate clean energy sources. Currently, technological advancement is affected by a series of barriers that prevent th.

What are the energy policies in Ecuador?

Energy policies in Ecuador emphasize the need to diversify energy sources. In Ecuador, energy subsidies are a barrier to achieving a diversified energy mix. The hydroelectric resource compromises the implementation of renewable energies. The adoption of renewable technologies is conditioned to local factors.

What is the Current PV energy capacity in Ecuador?

The latest report from the Agency of Electricity Regulation and Control (Agencia de Regulación y Control de Electricidad, ARCONEL) indicates that the current PV energy capacity in Ecuador is 27.63 MW . This number represents approximately 0.32% of the effective power produced by renewable and nonrenewable sources.

What barriers influence the expansion of PV energy in Ecuador?

Main barriers that influence the expansion of PV energy in Ecuador. Source: Authors. EB, economic barriers; PB, political barriers; SB, social barriers; TB, technical barriers.

How important is installed power in Ecuador?

In the Ecuadorian case, the use of installed power is growing, with special attention to large power plants, as exemplified by the Coca Codo Sinclair project, with 1500 MW . Projects currently at risk of erosion that affect feed flows expose the fragility of a poorly diversified system.

Does Ecuador use solar energy?

Despite this substantial solar potential in Ecuador, PV use remains marginal. The latest report from the Agency of Electricity Regulation and Control

(Agencia de Regulación y Control de Electricidad, ARCONEL) indicates that the current PV energy capacity in Ecuador is 27.63 MW .

How much does electricity cost in Ecuador?

In Ecuador, the real cost of electricity production and distribution is USD 0.09/kWh and is reduced to USD 0.04 USD/kWh after the public subsidy . However, the calculated electricity prices for PV and wind technologies are 0.12 USD/KWh and 0.15 USD/KWh, respectively .

## The cost of wind and solar complementary technology for Ecuadoria

### Dispatchability and energy storage costs for complementary ...

For example, wave energy reliability could reduce the cost of utility-scale energy storage by several million dollars per megawatt of generated power by 2050 (Osman et al., ...
