

## SolarMax Energy Systems

# The current direction from p to n of photovoltaic panel

## Overview

---

The photocurrent is a reverse current. Inside the photodiode, electrons travel from p material across the junction to the n side, and when short-circuited, a steady flow of electrons back into the p side from the external circuitry occurs, so the current through the diode is negative.

## The current direction from p to n of photovoltaic panel

---

### 4.2 P-N Junction , EME 812: Utility Solar Power and Concentration

In conclusion, the PN junction can only conduct in a single direction, giving rise to a current which increases very rapidly when the potential barrier is significantly lowered.
