

## SolarMax Energy Systems

**The integrated signal base station is powered off at night**

*Test certification*  
CE  FC 

## Overview

---

Does the FCC regulate nighttime broadcasting?

One of those FCC regulations pertains to nighttime broadcasting. According to the FCC website: “Most AM radio stations are required by the FCC’s rules to reduce their power or cease operating at night in order to avoid interference to other AM stations.

Why is AM radio better at night?

AM radio is better at night due to the landscape of the ionosphere, which changes after sunset. The signals can travel much further due to what’s known as sky-wave propagation. Additionally, some AM stations must stop operating after dark to reduce interference, which also helps some stations come through more clearly.

Why do radio stations need to reduce power at night?

Basically, because of the way radio waves travel at night, many Relevant Radio AM stations are required to reduce power when the sun sets in order to avoid massive interference with other stations. The good news is that Daylight Savings Time is on the horizon—March 8 this year—meaning we’ll be gaining an extra hour of daylight.

Why do AM radio stations stop working at night?

Most AM radio stations are required by the FCC's rules to reduce their power or cease operating at night in order to avoid interference to other AM stations. FCC rules governing the daytime and nighttime operation of AM radio stations are a consequence of the laws of physics.

Does sky-wave propagation improve AM signal strength after dark?

However, it’s not merely sky-wave propagation that improves AM signal strength after dark. The FCC also plays a role. According to FCC rules, many AM radio stations must stop operating or reduce power when airing at night.

This is designed to minimize interference.

Can a station have multiple records for different daytime and nighttime operations?

Note that a station may have multiple records for different daytime and nighttime operations.

## The integrated signal base station is powered off at night

---

### Do stations reduce power at night?

Only AM stations reduce power at night to decrease/eliminate interference to other stations on the frequency. This is not an issue with FM or TV stations due to the frequencies ...
