

SolarMax Energy Systems

The largest solar all-in-one home appliance

Overview

What are solar home appliances?

Solar home appliances are a whole new micro-universe, similar but at the same time completely different from those big solar panels you see on rooftops. From your kitchen to your living room, and even your bathroom, solar-powered appliances are ready to revolutionize our lives. And I'm about to show you how!.

What are solar-powered appliances?

Solar-powered appliances come in many different shapes and sizes, so there is something here for everyone. Solar power is a natural source of renewable energy which is environmentally friendly, safe, cost-efficient, and freely available. The sun provides 1.5 kW/m² of solar irradiance to the earth's surface daily.

Why should you consider solar powered appliances?

Solar powered appliances are clean, green, and use the sun's free energy. Home appliances consume up to 20% of our total energy use, so it makes sense, both from a financial and an environmental viewpoint, to find ways to either cut down our energy consumption or invest in appliances which use alternative energies.

What is a solar oven?

A solar oven is a type of solar powered appliance that uses the sun's heat to cook food. Solar ovens are gradually growing in popularity and there are now hundreds of different designs on the market. They are clean, green and use the sun's free energy.

Is it worth investing in solar powered appliances?

Investing in solar powered appliances can help lower your carbon footprint and save you money in the long term. While installing solar panels to power

your entire house is another option, solar powered appliances offer a more targeted approach to harnessing the power of the sun.

How much does a solar oven cost?

For example, a solar oven can cost anywhere from \$100 to \$400, while a conventional oven can range from \$200 to \$500. But solar freezers and refrigerators are almost twice the price of their traditional counterparts. Since they run on 12V DC, they use a completely different refrigerant system, pushing the price higher.
