

## SolarMax Energy Systems

# Thin-film photovoltaic module warranty

100KWH/215KWH

LIQUID/AIR COOLING

IP54/IP55

BATTERY 6000 CYCLES

## Overview

---

Thin-film solar panels are a type of photovoltaic solar panels that are made up of one or more thin layers of PV materials. These thin, light-absorbing layers can be over 300 times thinner than a traditional silicon solar panel. Thin-film solar cells have built-in semiconductors, making them the solar panels the.

Thin-film and traditional solar panels produce solar energy similarly and are intended for the same purpose. However, there are key.

Thin-film solar panels are differentiated by what they're made of. There are four different types of materials used for thin-film solar panels: .

They're thin, adjustable, and cheaper to install than regular panels – so what's the catch?

With thin-film panels, there are a few disadvantages.

Thin-film solar panels cost an average of \$0.50 to \$1 per watt for the materials. For example, an average thin-film system would consist of ten panels. The total cost of these panels.

Polysolar warrants the MODULES to be free from the mechanical defects in materials and workmanship that have an effect on module functionality under normal application, installation, use and service conditions for a period of Five (5) year from the date of sale and shipment as shown in the invoice to the customer who purchases the MODULES directly from Polysolar or its certified agents (hereinafter referred to as the "Customer"), and agrees, at its sole discretion, either repair or replace the defective MODULES.
