

SolarMax Energy Systems

Turkish-made small household inverter

Overview

What is a microinverter solar system?

Typically, microinverters are “distributed” inverters. Solar PV systems with microinverters have a small inverter installed for each individual solar panel. Instead of sending energy from every panel to a single inverter, microinverters convert the DC energy to AC energy on the roof itself.

How do solar inverters work?

After the energy conversion, solar electricity can power all the appliances and electronics. If the solar panels produce more electricity than required, it goes back into the grid. There are mainly three types of solar inverters — string inverters, micro-inverters, and power optimizers. All these inverters have a different system.

Which inverter is best for a solar system?

String inverters are the most economical among other options and are a proven inverter technology. These inverters are also the easiest to maintain as they are easy to access. If a solar system uses a string inverter, it will produce limited electricity.

Why should you add solar inverters to your inventory?

Besides solar panels, there are other components like solar inverters that are critical for both consumers and businesses. Particularly, if you are a solar installer, adding solar inverters to your inventory will help your business grow since users need this equipment to maximize and regulate the solar energy of their solar system.

How many companies are involved in inverter production?

Companies involved in Inverter production, a key component of solar systems. 13 Inverter manufacturers are listed below. List of Inverter manufacturers. A complete list of component companies involved in Inverter production.

How has privatization impacted the solar power industry in Turkey?

The government also believes that the privatization of the power distribution in the country has contributed to boosting the level of competition and subsequently growing the solar capacity in the country. There is a good mix of local and foreign suppliers and distributors of solar power equipment in Turkey.
