**Two 24v lithium battery packs  
can be used in series**

## Overview

How to wire two batteries for 24 volts?

If you need to create a 24-volt electrical system, you can wire two batteries together to achieve this voltage. Here are the steps to wire two batteries for 24 volts: Choose suitable batteries: First, select two 12-volt batteries that have the same voltage and capacity.

Why are lithium batteries connected in series?

Lithium batteries are connected in series when the goal is to increase the nominal voltage rating of one individual lithium battery - by connecting it in series strings with at least one more of the same type and specification - to meet the nominal operating voltage of the system the batteries are being installed to support.

Why do I need Two batteries for 24 volts?

One of the main reasons for wiring two batteries for 24 volts is to meet the voltage requirements of specific appliances or machinery. Some devices, such as power tools, electric vehicles, or large-scale lighting systems, operate on 24 volts.

What is the capacity of a battery pack?

The capacity of the battery pack is the sum of the capacities of the individual batteries. Again, make sure that all of the batteries are the same size, that is that they have the same amp-hour capacity. There are many ways to connect a group of batteries in both series and parallel at the same time.

How many volts is a battery pack?

Again, the total battery pack voltage is 24 volts and that the total battery pack capacity is 40 amp-hours. NOTE: The following diagrams show some ways to connect Battery Tender battery chargers to various battery packs connected in series and parallel. One Battery, One Charger, One Voltage.

How many batteries are in a series connection?

In each of the examples, the 4 batteries are identified as A, B, C, and D. Example 1, shown in Figure 4, has 2 pairs of series connected batteries joined in a single parallel connection. In this type of arrangement, we refer to each pair of series connected batteries as a "string". Batteries A and C are in series. Batteries B and D are in series.
