

SolarMax Energy Systems

Türkiye Energy Storage Power Generation Project

Overview

Are storage-integrated power plants possible in Türkiye?

While no grid-scale storage-integrated power plants are operational in Türkiye yet, the country has a robust pipeline of approximately 33 GW of storage-integrated wind and solar projects with pre-licensing periods extending until 2030. This strong investor interest highlights the potential of storage-integrated power plants.

Does Türkiye have storage-integrated solar power?

In the area of storage-integrated solar power, Türkiye is making significant progress. As of 2024, 412 solar power plants with storage, representing a combined installed capacity of over 14 GW, have received pre-licenses. This figure far exceeds the 2.1 GW storage capacity target set in the NEP for 2030.

How big is Türkiye's energy storage capacity?

Türkiye's 35 GWh storage capacity accounts for grid-scale projects alone. Global energy storage investments have surpassed 150 GWh. Türkiye has already begun installations in Hungary, Bulgaria, and Spain, leveraging its geographic advantage close to Europe.

What type of energy does Türkiye generate?

Approximately 56% of Türkiye's electric power generation capacity consist of renewable energy, including hydroelectric, wind, solar, geothermal, and biomass power plants, making Türkiye the fifth-largest generator of renewable energy in Europe and the 11th largest in the world.

Can Türkiye achieve a more ambitious growth trajectory in battery storage?

The scale of storage-integrated solar capacity alone demonstrates Türkiye's potential to achieve a far more ambitious growth trajectory in battery storage, paving the way for stronger integration of renewable energy into the grid.

Can Türkiye use untapped solar power to accelerate solar energy momentum?

Türkiye could utilize untapped capacities to advance solar energy momentum through floating, storage-integrated, hybrid and rooftop solar potential. The country has a pipeline of 33 GW in pre-licensed storage-integrated solar and wind projects, far exceeding the official 2030 target of 2.1 GW.
