

SolarMax Energy Systems

Türkiye exports photovoltaic modules

Overview

With strategic manufacturing capabilities, competitive pricing, and a logistics network bridging Asia and Europe, Türkiye now plays a pivotal role in the export of solar panels, wind turbines, battery storage systems, and EV charging stations. Is Turkey the first European country to produce solar panels?

Minister of Industry and Technology Mehmet Fatih Kacır said earlier this year that Turkey is the first in Europe in solar panel production. Kalyon Energy or Enerji completed its Konya Karapınar solar power plant last year. It has 1.35 GW in peak capacity, more than any facility of the kind in geographic Europe.

How much does a PV system cost in Türkiye?

In summer 2023, a new 10-year feed-in tariff (FIT) of TRY 1.06 (\$0.03)/kWh was introduced for PV systems installed between July 1, 2021, and Dec. 31, 2030. Projects that use PV modules made in Türkiye get even more support, benefiting from a further five-year FIT of TRY 0.288/kWh.

Will a vat tariff affect foreign solar panels?

A tariff of \$25/m² is now in place for solar modules imported from Vietnam, Malaysia, Thailand, Croatia, and Jordan. If that wasn't enough to discourage module imports, changes to VAT rules, in November 2023, have had a significant impact on the cost-per-Watt of foreign photovoltaics.

How much power does Türkiye have in 2022?

Türkiye At the end of December 2022, total installed power capacity in Türkiye reached 103,809 MW, out of which PV plants accounted for 9,425 MW. The amount of solar PV projects under completion are estimated to be 1-1.5 GW. This capacity can be considered in addition to the installed capacity in 2022.

How many Turkish module assemblers are there?

And as pv magazine discovered at SolarEX 2024, a three-day trade fair in Istanbul in April 2024, the number of domestic module assembly businesses

has ballooned. Different numbers were discussed on the exhibition floor but the general consensus was that there are at least 80, and likely more than 90, Turkish module assemblers.

Will China impose antidumping fees on imported PV modules?

In 2017, the government unveiled a list of 16 China-based PV manufacturers whose imported modules would be subjected to \$20/m² antidumping fees. Those were the lucky ones, as other Chinese businesses were hit with a \$25 fee from the same measure.
