

SolarMax Energy Systems

US solar panel tax

Overview

If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit.

You may claim the residential clean energy credit for improvements to your main home, whether you own or rent it. Your main home is generally where you live most of the time.

The Residential Clean Energy Credit equals 30% of the costs of new, qualified clean energy property for your home installed anytime.

Qualified expenses include the costs of new clean energy property including: 1. Solar electric panels 2. Solar water heaters 3. Wind.

The 30% federal solar tax credit ends after December 31, 2025, and missing the deadline could add thousands to the cost of your home solar system. According to SolarReviews data, you can expect to pay \$23,840 for a typical 8-kW solar installation. Do solar panels qualify for a tax credit?

Under the new tax credit timeline, solar panel systems installed by December 31, 2025, will still qualify for the full 30% credit. But systems installed after that date wouldn't qualify for any tax credit at all. The federal solar tax credit is valuable because it's a dollar-for-dollar reduction of your federal tax bill.

Are solar panels tax deductible?

Readers interested in installing solar products should use their best judgment and seek advice from a licensed tax professional. In 2025, the federal Investment Tax Credit (ITC) allows homeowners to claim 30% of their solar panel system costs as a tax credit on their federal taxes.

Will solar panels be tax deductible in 2025?

In 2025, the federal Investment Tax Credit (ITC) allows homeowners to claim 30% of their solar panel system costs as a tax credit on their federal taxes. Starting January 1, 2026, the residential solar tax credit will disappear completely.

How does the solar tax credit affect residential solar?

Here's is how this law impacts residential solar: The 30% solar tax credit claimed by homeowners (25D) would be terminated at midnight on December 31, 2025. Homeowners who have their systems installed before the end of the year can still claim this credit against their federal tax liability.

When did the solar panel tax credit start?

The solar panel tax credit actually originated during the oil crisis in 1978. It was then brought back in 2005 and, with some tweaks and changes, has persisted ever since. It's often referred to as the "Solar Investment Tax Credit" or ITC for short.

Do you have to own a solar system to get tax credit?

You must own your solar energy system to take advantage of the ITC—if you signed a solar lease or PPA, you aren't eligible for the 30% tax credit. Homeowners who want to claim the tax credit before it expires should get quotes now. What is the federal solar investment tax credit?
