# User-side energy storage power station connected to the grid

## Overview

---

On April 11, 2024, Guoxuan 50 MW/100 MWh Energy Storage Power Station was successfully connected to the grid. The project is China Power's and Anhui's largest user-side energy storage project connected to the grid, with great demonstration significance. What are the applications of grid side energy storage power stations?

**Further research directions** Due to the important application value of grid side energy storage power stations in power grid frequency regulation, voltage regulation, black start, accident emergency, and other aspects, attention needs to be paid to the different characteristics of energy storage when applied to the above different situations.

Are China's Grid side energy storage projects effective?

Due to factors such as high prices of energy storage devices and imperfect market models, China's grid side energy storage projects are currently in their early stages, with limited engineering applications and a lack of evaluation methods of the actual operational effectiveness of power stations from multiple perspectives.

How can energy storage power stations be evaluated?

For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid.

What is the largest energy storage power station in China?

The 101 MW/202 MW•h grid side energy storage power station in Zhenjiang, Jiangsu Province, which was put into operation on July 18, 2018, is currently the largest grid side energy storage power station project in China and the world's largest electrochemical energy storage power station.

How can energy storage technology improve the power grid?

Energy storage technologies can effectively facilitate peak shaving and valley filling in the power grid, enhance its capacity for accommodating new energy generation, thereby ensuring its safe and stable operation 3, 4.

What is the largest grid-forming energy storage station in China?

This marks the completion and operation of the largest grid-forming energy storage station in China. The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large-scale wind and photovoltaic bases nationwide.
