MONITORING OF SYSTEM STATUS

## Overview

---

The Renewable Energy Ready Home (RERH) specifications were developed by the U.S. Environmental Protection Agency (EPA) to assist builders in designing and constructing homes equipped with a set of fe.

How do I choose the best solar panels?

Homeowners must select the right mount system type (roof or ground) for their solar panels. Roof-mounted solar panels are the most common choice for residential installations in the United States. They offer a better return on investment than ground-mount systems and save on space.

Are there different types of solar panels?

Almost all home solar installations today use monocrystalline solar panels. There are other types of solar panels (polycrystalline and thin-film solar panels) that are rarely used in residential solar projects. What are the top brands of solar panels?

It's easy to find yourself in the weeds of solar panel research.

How many solar panels do I Need?

Once you have your final array size, simply divide by the wattage of your desired solar panels to figure out how many panels you need. Using our example of a 7.2 kW (7,200-watt) array for 100% offset, here's a sample system that would cover our needs: 7.2 kW solar array with 400W Phono Solar panels:  $7,200 \text{ watts} / 400 \text{ watts} = 18 \text{ panels}$ .

Do solar panels need maintenance?

Solar panels don't require much maintenance, but routine solar panel cleanings can help keep your panels operating at their very best. You may come across solar repairs along the way, like software issues. Hardware and equipment issues are less common and are typically covered by your solar installer or manufacturer warranty!.

Are solar panels a good choice for your roof?

Solar panel systems, also called solar photovoltaic (PV) systems, are an increasingly popular choice for homeowners looking to reduce their carbon footprint and save money on energy bills. Before choosing a new system, you should know what options work for your roof, the best ways to connect the panels, and more.

Will solar panels power my home at night?

But snow can be easily cleaned off or will melt quickly. Will my solar panels power my home at night?

No, your solar panels won't power your home at night. However, most home solar panel systems are sized to generate enough electricity during the day to cover the costs of nighttime energy usage under net metering.
