# What do the Philippine power stations use to generate electricity

#### **Overview**

Coal-fired power plants are currently the biggest source of electricity in the Philippines. They burn coal to heat water, creating steam that spins turbines to generate electricity. These plants can produce a lot of power, but they also release harmful pollutants into the air. What are the main sources of electricity in the Philippines?

1. Coal-Fired Power Plants: The Workhorse of Energy Coal-fired power plants are currently the biggest source of electricity in the Philippines. They burn coal to heat water, creating steam that spins turbines to generate electricity. These plants can produce a lot of power, but they also release harmful pollutants into the air.

Why is electricity important in the Philippines?

Electricity Production: The Philippines is one of Southeast Asia's fastest-growing economies, and electricity demand is increasing accordingly. The government aims to boost renewable energy's share in the power mix, with a focus on geothermal, solar, wind, and hydropower. 2. Types of Power Plants in the Philippines.

How does electricity work in the Philippines?

The electricity sector in the Philippines provides electricity through power generation, transmission, and distribution to many parts of the country. The Philippines is divided into three electrical grids, one each for Luzon, the Visayas and Mindanao.

How much power does the Philippines generate a year?

The Philippines is highly dependent on coal as source for electricity generation. Coal power plants generated 46.8 million MWh in 2017, making up half of the country's power generation mix. Renewable energy and natural gas power plants followed with respective shares of 24.6% and 21.8% to the country's gross power generation.

What are the major power plants in the Philippines?

Key Plants: Sual Power Station (Pangasinan): The largest coal-fired power plant in the Philippines, providing electricity to Luzon. Masinloc Power Plant (Zambales): A major coal-fired power plant supplying the Luzon grid. Calaca Power Plant (Batangas): A coal power station located near Metro Manila.

How does the Philippines get its power?

The Philippines gets its power from a mix of sources, including traditional fossil fuels and a growing number of renewable energy projects. Let's take a closer look at each type of power plant and learn how they work: 1. Coal-Fired Power Plants: The Workhorse of Energy
