

## SolarMax Energy Systems

# What is the difference between photovoltaic EPC and energy storage EPC

**LFP 280Ah C&I**

## Overview

---

What is solar EPC?

The term Solar EPC represents a model where one company, known as the EPC contractor, is responsible for managing the entire process of a solar energy project. The acronym EPC stands for Engineering, Procurement, and Construction, encapsulating the three core phases of solar project development.

What is solar EPC (engineering procurement & construction)?

To ensure the successful implementation of solar projects, the Solar EPC (Engineering, Procurement, and Construction) model is widely adopted. Solar energy continues to gain momentum as one of the most promising renewable energy sources.

What is the difference between a solar developer and an EPC firm?

Solar developers are the visionaries who conceptualize projects, secure necessary permissions and funding, and bring them to the stage where they can be built. Solar EPC firms are the builders who take on the technical challenge of constructing and commissioning the project.

How does the EPC model work for solar projects?

For companies like JMS Energy, managing and delivering extensive solar projects requires a coordinated and efficient approach. The EPC model provides this by consolidating all necessary services into a cohesive process, allowing large projects to proceed smoothly and reliably.

Should you choose an EPC contract for a solar project?

Given the significant monetary value of EPC Contracts, and the potential adverse consequences if problems occur during construction, the lowest price should not be the only factor used when selecting a Contractor. As noted earlier, an EPC Contract is one of a suite of agreements necessary to develop

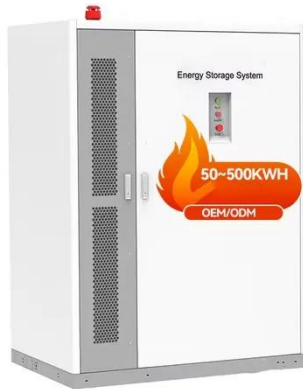

a solar project.

What is EPC & how does it work?

EPC stands for Engineering, Procurement, and Construction. These firms are responsible for the technical aspects of bringing a solar project to life. They execute the project according to the specifications laid out by the developer and ensure it is built on time, within budget, and according to all relevant standards.
