

## SolarMax Energy Systems

# What is the voltage of a 256w photovoltaic panel

## Overview

---

What is the voltage of a solar panel?

The voltage of a solar panel is the result of individual solar cell voltage, the number of those cells, and how the cells are connected within the panel. Every cell and panel has two voltage ratings. The Voc is the amount of voltage the device can produce with no load at 25° C.

What is a solar panel nominal voltage?

Nominal voltage is an approximate solar panel voltage that can help you match equipment. The voltage is usually based on the nominal voltages of appliances connected to the solar panel, including but not limited to inverters, batteries, charge controllers, loads, and other solar panels.

Do solar panels produce a higher voltage than nominal voltage?

As we can see, solar panels produce a significantly higher voltage (VOC) than the nominal voltage. The actually solar panel output voltage also changes with the sunlight the solar panels are exposed to.

How to calculate solar panel output voltage?

If you know the number of PV cells in a solar panel, you can, by using 0.58V per PV cell voltage, calculate the total solar panel output voltage for a 36-cell panel, for example. You only need to sum up all the voltages of the individual photovoltaic cells (since they are wired in series, instead of wires in parallel). Here is this calculation:.

What is the output voltage of a 36 cell solar panel?

36-Cell Solar Panel Output Voltage =  $36 \times 0.58V = 20.88V$  What is especially confusing, however, is that this 36-cell solar panel will usually have a nominal voltage rating of 12V. Despite the output voltage being 18.56 volts, we still consider this a 12-volt solar panel. What gives?

Which is the correct voltage; 12V or 20.88V?

.

What is a solar panel voltage & how does it work?

Let's break it down in simple terms. Voltage is the push behind the electricity that flows through your solar panels. Speaking of panels, every solar panel has a certain voltage output. Keep in mind that this output might vary based on factors like sunlight, temperature, and the number of solar cells in the panel.
