

## SolarMax Energy Systems

# What types of containers can generate electricity

## Overview

---

These solutions are available in various configurations, including battery-powered, solar-powered, and hydrogen fuel cell containers, each with distinct advantages. What is a containerized energy storage system?

A Containerized Energy-Storage System, or CESS, is an innovative energy storage solution packaged within a modular, transportable container. It serves as a rechargeable battery system capable of storing large amounts of energy generated from renewable sources like wind or solar power, as well as from the grid during low-demand periods.

Can I add more container units to my energy storage system?

Each container unit is a self-contained energy storage system, but they can be combined to increase capacity. This means that as your energy demands grow, you can incrementally expand your CESS by adding more container units, offering a scalable solution that grows with your needs.

Can a reefer container plug into an external power grid?

When a reefer container is stationary at a port or facility, it can plug into an external power grid to maintain its internal temperature. However, during transit, access to external power sources is not feasible. In these situations, gensets become the primary power source.

Why do reefer containers need gensets?

Gensets allow reefer containers to be transported seamlessly via trucks, trains, or ships without compromising refrigeration capabilities. Advanced monitoring systems in modern gensets provide real-time data on temperature fluctuations and fuel usage and address issues proactively before they affect cargo quality.

What are the different types of Genset units used for reefer containers?

There are three main types of genset units used for reefer containers: clip-on

gensets, under-mount gensets, and on-chassis gensets. Each type serves specific purposes based on transportation needs and logistical requirements. Clip-on gensets are portable units that attach directly to the front or chassis of the reefer container.
