Which direction should photovoltaic panels on a sloped roof face

Overview

In most cases, the best direction for solar panels is facing south 1. Arrays that are appropriately oriented can improve energy output by up to 30% or more 2. However, factors such as roof slope and proximity to the equator may have some homeowners considering other directions (including north). Which direction should solar panels be oriented?

The best direction for solar panels is true south in the northern hemisphere, including the U.S. These orientations will allow for the most direct sunlight to hit your panels, which helps improve electricity generation and maximizes your electricity bill savings with solar.

Should solar panels be angled on a low angled roof?

Flush-mounting solar panels on a low-angled roof will produce less electricity and reduce solar savings. To receive exceptional solar savings, you'll want your solar panels to be angled in a way that optimizes the sunlight exposure for that location. This is done by tilting your solar panels at the same angle as the latitude of your home.

Should you install solar panels on a south oriented roof?

Panels on roofs that face 20% east will generate 85% of those on a roof that's oriented south. You may need to install more solar panels to account for the loss in energy production if your roof doesn't face true south, but solar is still a good option even if your roof orientation is less than ideal.

How do bifacial solar panels affect roof orientation?

Bifacial solar panels can capture light from both sides, affecting optimal orientation strategies: Complex roof layouts may benefit from panels facing multiple directions: Energy storage systems can influence optimal panel orientation strategies.

Should solar panels face east or west?

Solar panels that face east or west will produce about 15% less energy than those installed on a south-facing roof. A north-facing roof is the worst direction for solar, as panels will produce around 30% less energy than if they face south.

How much solar energy does a south facing roof generate?

According to data from the U.S. Energy Information Administration (EIA), solar panels on roofs that are tilted 20% to the west from true south will still generate 89% of what a southern-facing roof will. Panels on roofs that face 20% east will generate 85% of those on a roof that's oriented south.

Which direction should photovoltaic panels on a sloped roof face

Best Angle for Solar Panels (& Direction): Every State & Zip ...

Knowing the best angle for solar panels in every state and zip code (also known as the Azimuth angle calculation) is the most accurate method to get the maximum amount of ...
