Overview

Do I need a power supply adapter in Bali?

So, you need to know the power supply issue as well as the plug type, because you may need an adapter if your home country's supply is different to Bali's. So let's recap: The standard voltage in Bali is 230V, and the frequency is 50Hz. If your country uses a different power supply (eg: North America is 120 volts) you will need an adapter.

Where can I buy a power adapter in Indonesia?

Ensure your adapter supports Type C and F plugs, and if you're extra cautious, include Type G if you encounter it during your stay. If you prefer buying adapters locally, they're readily available at airports, electronics shops, and convenience stores in Indonesia. Platforms like Traveloka can also help you locate stores near your accommodation.

What type of plug does Indonesia use?

Indonesia primarily uses two plug types: Type C (Europlug): Common across Europe, this plug type features two round pins. Type F (Schuko): Similar to Type C but with two grounding clips on the sides. It's slightly larger and sturdier. Most devices should work with Type C and F plugs, as they dominate the country.

Do I need an adapter in Indonesia?

In Indonesia, you will encounter Type C and Type F plugs, identical to those used in many parts of Europe. This similarity means European travelers often do not need an adapter when visiting Indonesia. Indonesia operates on a standard voltage of 230V and a frequency of 50Hz, the same as Europe.

What voltage is used in Europe & Indonesia?

Europe and Indonesia both operate on a standard voltage of 230V and a frequency of 50Hz. However, always check your device specifications to

ensure compatibility. Europe is a diverse continent with a relatively standardized approach to power plugs and voltage. Here's what you need to know: Most European countries use Type C and Type F plugs.

Are Indonesian plugs compatible with European plugs?

While Indonesia and Europe share many similarities in their power plug standards, there are still some nuances to consider. Both regions use Type C and Type F plugs and operate on 230V/50Hz. However, some European countries, like the UK, use Type G plugs, which are not compatible with Indonesian sockets without an adapter.
